

To Whom It May Concern:

The Write-On Handheld™ device by ASI has really made a difference at Stacks' Restaurant. With the high customer volume and diverse menu that we offer everyday the Write-On Handheld has made my wait staff more effective and my customers happier. It can be hard to keep track of such an extensive menu like we have, one in which you can order a hamburger for breakfast or pancakes for lunch, but ASI puts it right in the palm of your hand – so there's never a question.

Some people may think that such a new and exciting technology might only be appropriate for fine dining establishments or upper scale dinner clubs, but that's not true. I honestly believe that the Write-On Handheld can help almost any restaurant increase its customer turnover while cutting down on its wait staff at the same time. Fewer waiters or waitresses can handle more tables because they don't have to run back and forth to a fixed terminal to input food orders. In other words, they're always helping the customers who need help, when they need it.

Overall, I am highly satisfied with the handheld's performance and would highly recommend it to any restaurateur.
